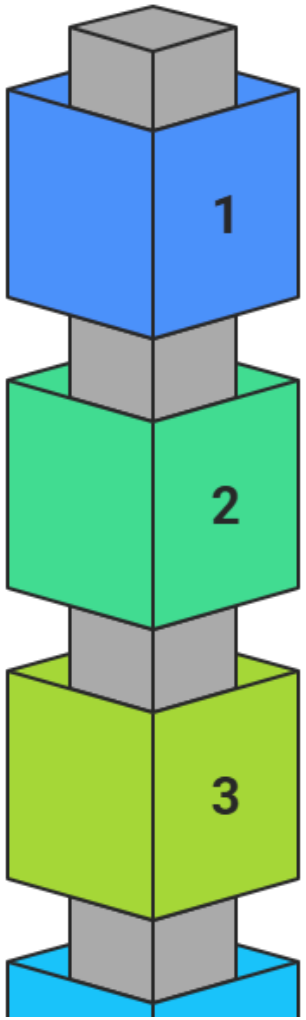
Project Overview

Digital Wardrobe Management



Digital Record

Users create a digital inventory of their clothing items.

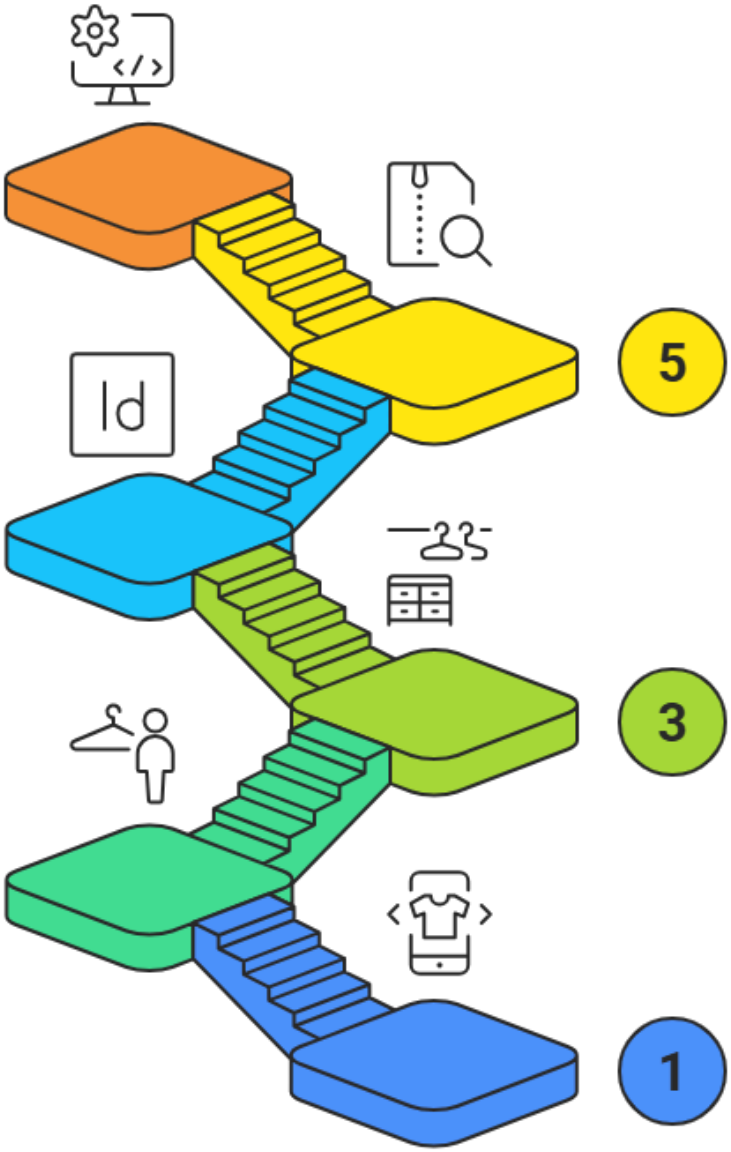
Categorization

Items are organized into logical categories for easy access.

Grid Layout

Items are displayed in an organized grid for visual appeal.

Specific Objectives



6 Apply Technologies

Use modern web development technologies for a responsive application.

5 Implement Filtering

Provide filtering options for easy navigation of clothing items.

4 Develop UI

Create an interactive and visually appealing user interface.

3 Categorize Items

Organize clothing items into categories for better organization.

2 Add & Manage Items

Allow users to easily add and manage clothing items.

1 Design Web App

Create a digital platform for wardrobe organization.

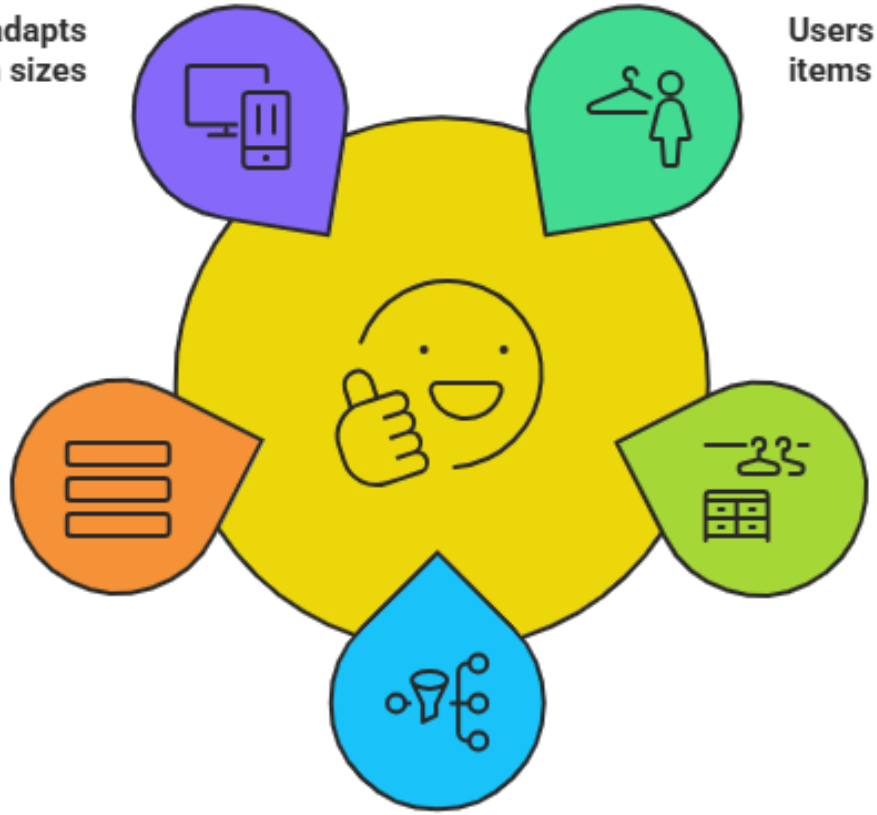
Key Features

Responsive Design

The application adapts to different screen sizes

Clothing Item Addition

Users can add new items to their wardrobe



User-Friendly Interface

The interface is intuitive and easy to navigate

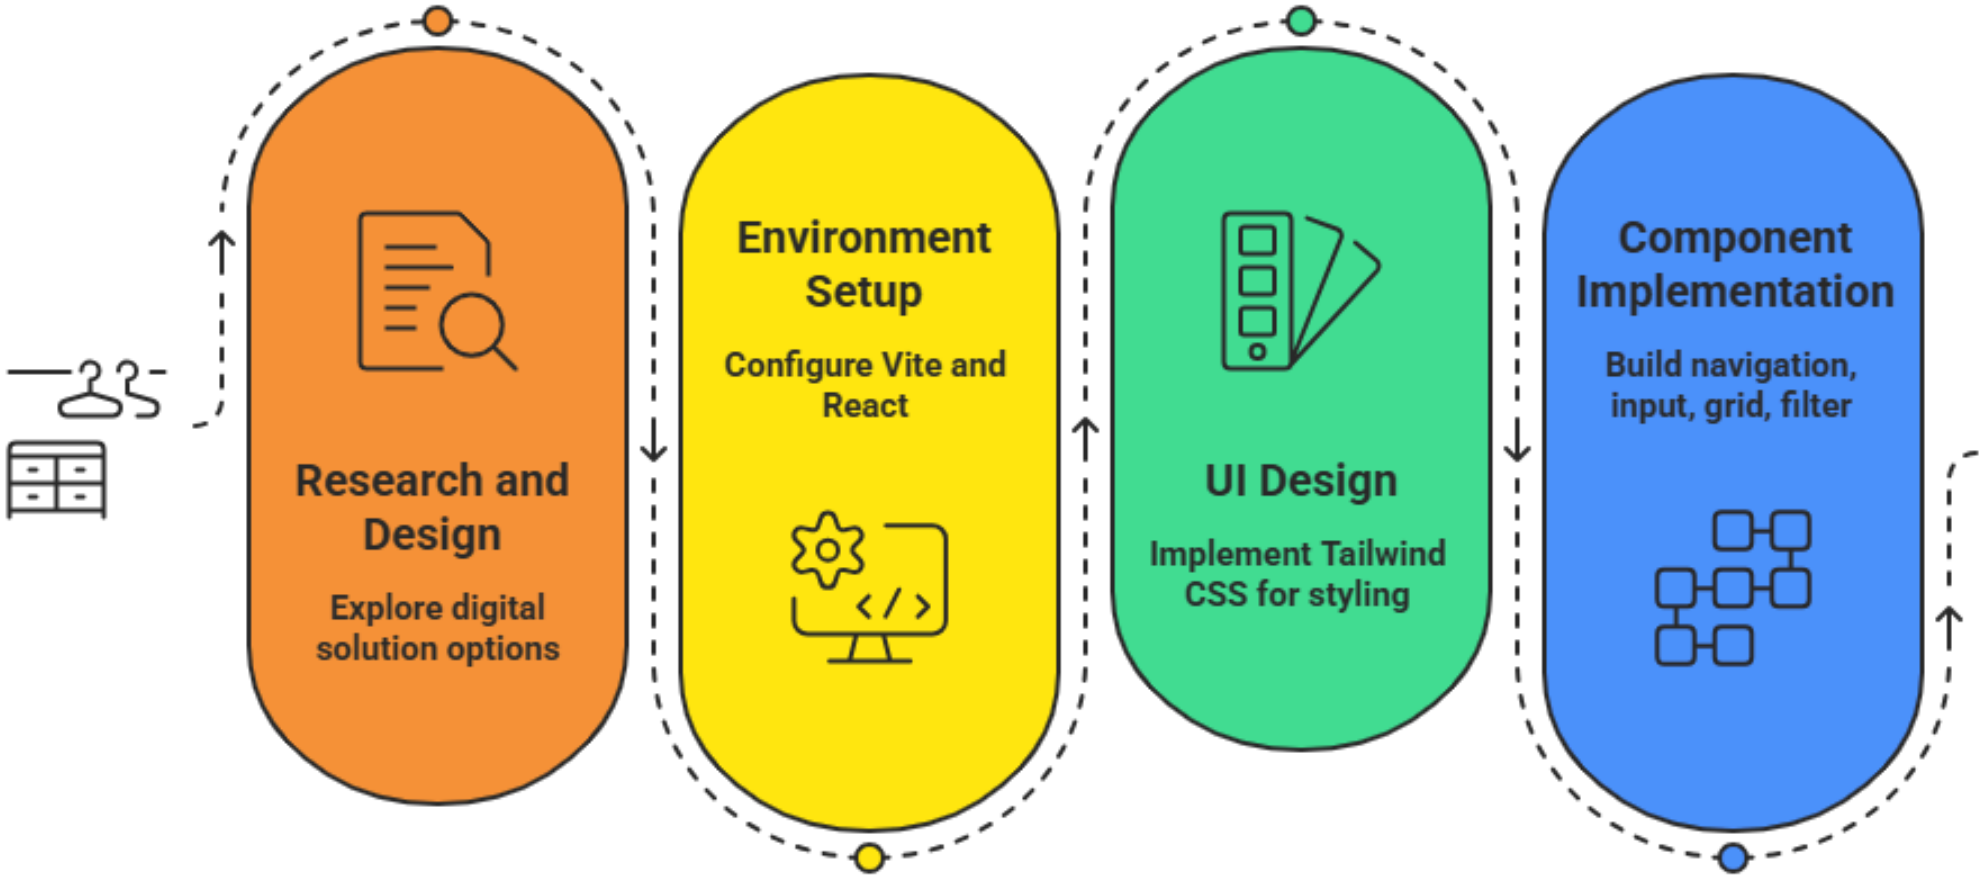
Wardrobe Visualization

Items are displayed in a grid for easy viewing

Category-Based Filtering

Users can filter items by type

Progress Summary



Detailed Progress – Development Phase

Navigation Bar Component

Allows users to navigate through the application.

Clothing Form Component

Enables users to add clothing items into the system.

Wardrobe Grid Component

Displays all clothing items in a structured grid layout.

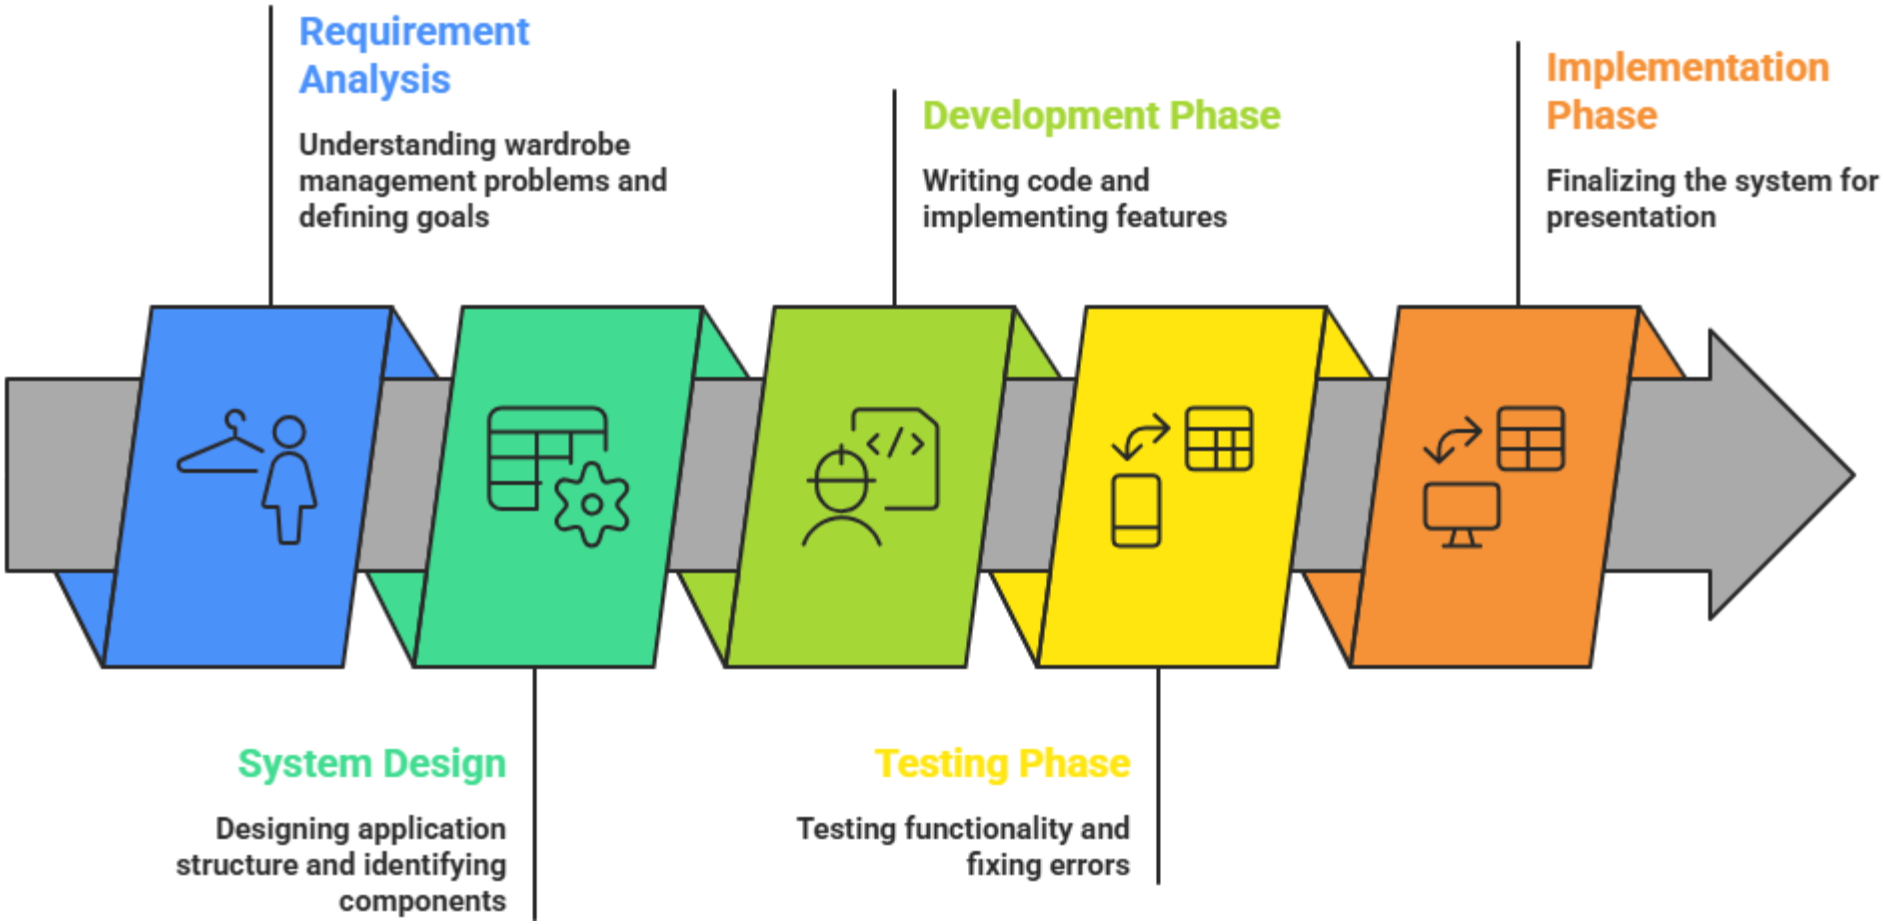
Filter Component

Allows users to filter clothing items by category.

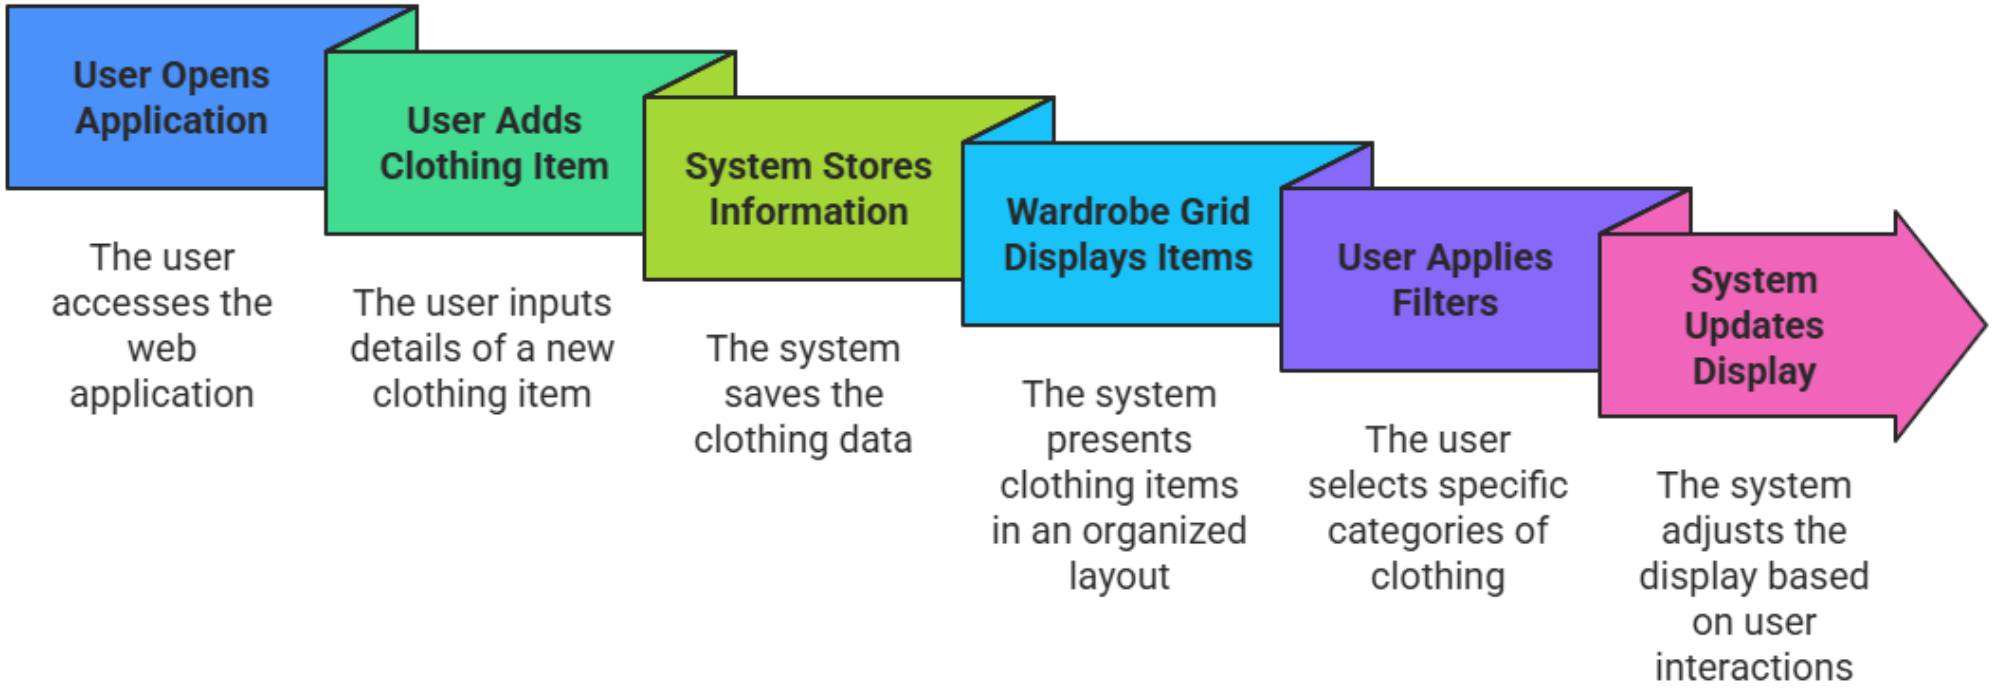
UI Styling

The user interface was styled using Tailwind CSS to make the design modern and responsive.

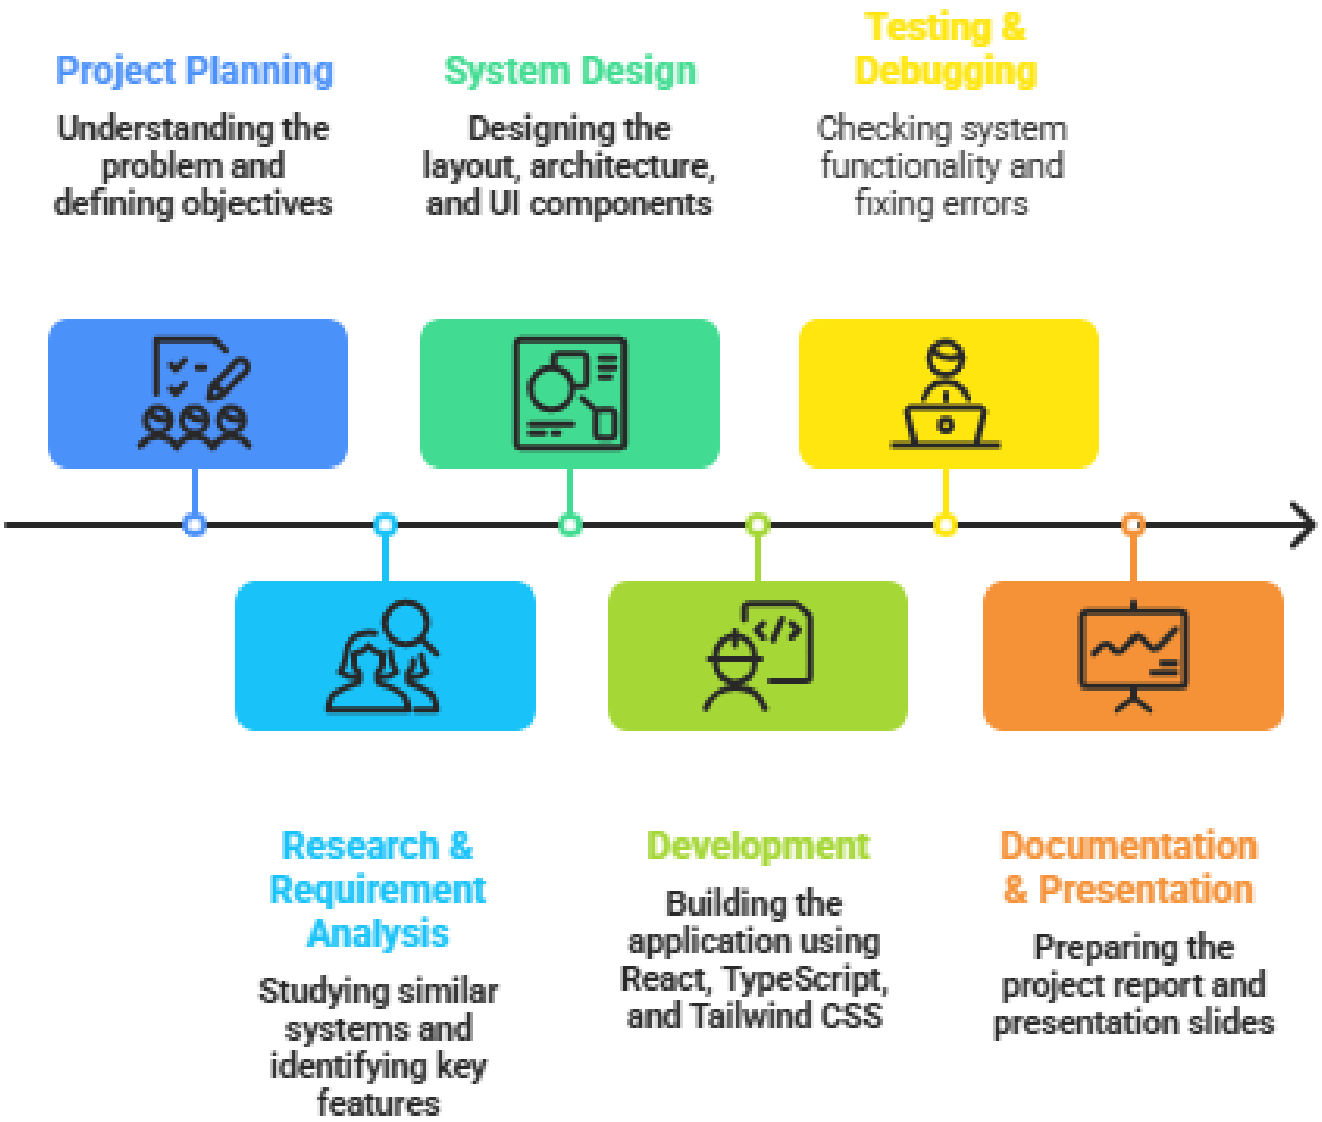
Methodology



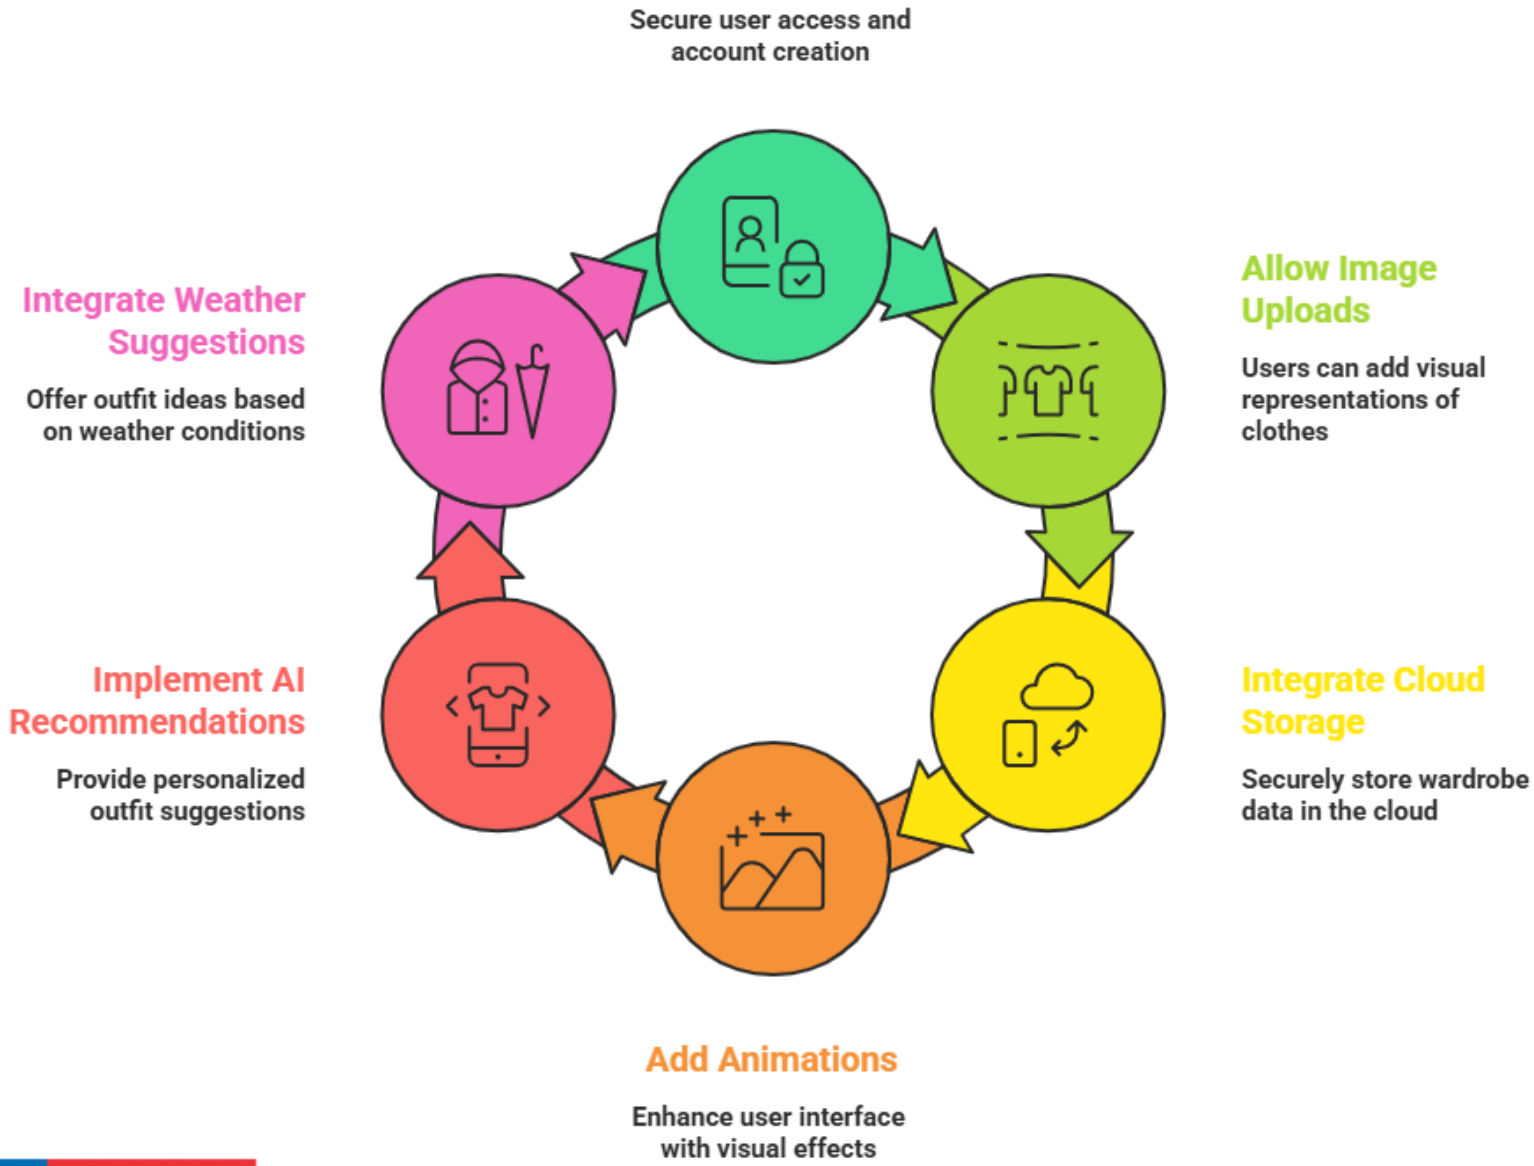
Prototype/Project Flow diagram/Architecture



Project Timeline



Next Steps and Goals



Made with Napkin

Data & Resources

Programming Languages

TypeScript and JavaScript provide flexibility and efficiency for web development.

Frameworks and Libraries

React and React Router enable the creation of interactive and dynamic user interfaces.

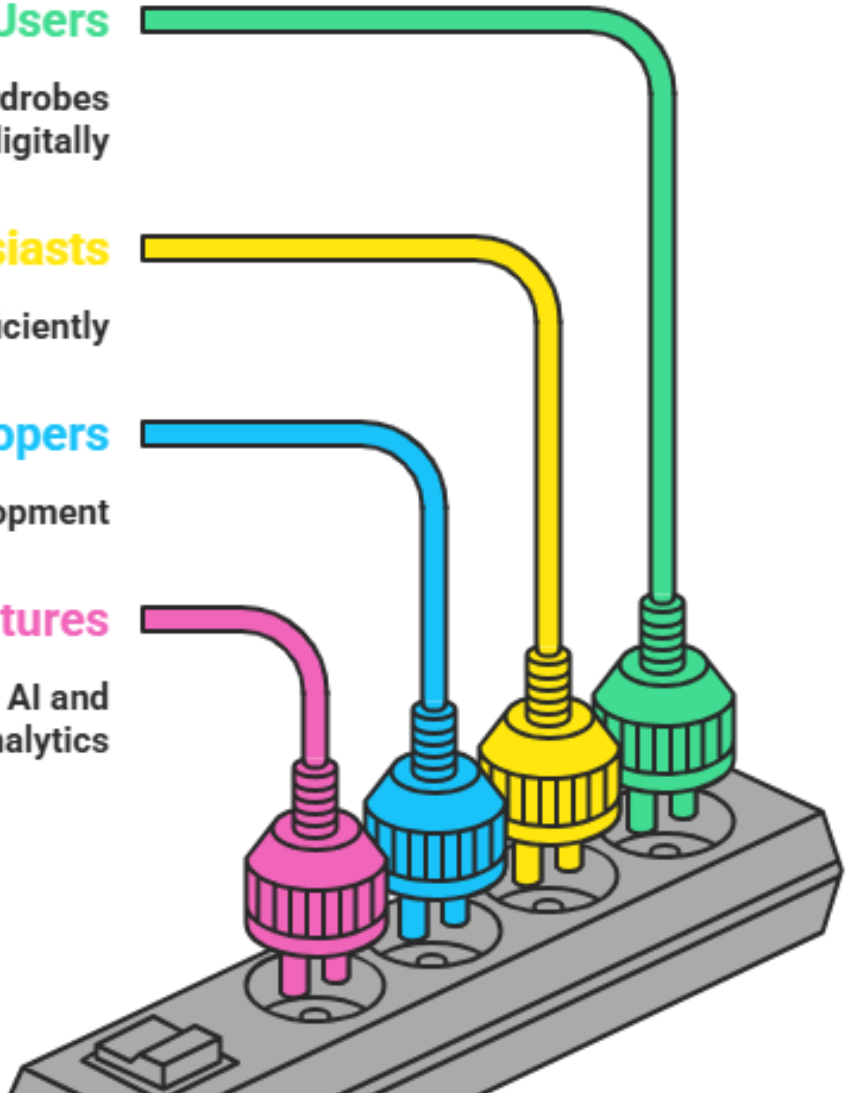
Styling Tools

Tailwind CSS offers a utility-first approach for rapid and consistent styling.

Development Tools

Vite and Node.js enhance the development workflow with fast builds and server management.

Project Usecases & Scope



Individual Users

People organizing their wardrobes digitally

Fashion Enthusiasts

Users planning outfits efficiently

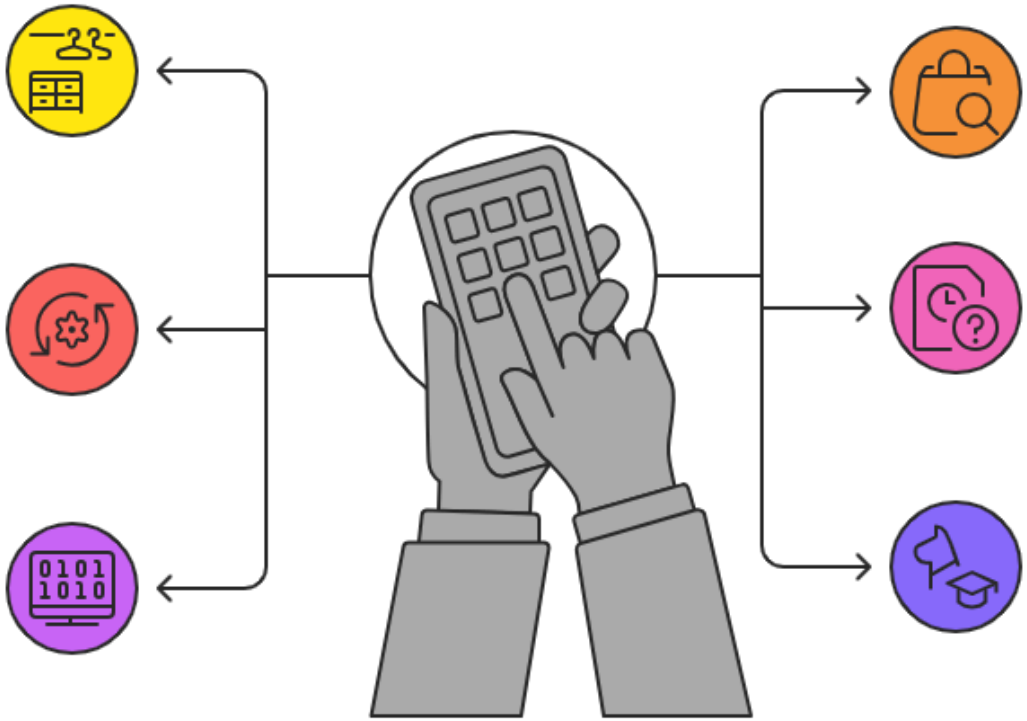
Students and Developers

Learners understanding web development

Advanced Features

Expanding the system with AI and analytics

Expected Results & Impact



Digital Organization

Help users organize their clothes digitally.

Improved Efficiency

Improve wardrobe management efficiency.

Technology Demonstration

Demonstrate practical implementation of modern web technologies.

Clear View

Provide a clear view of all clothing items.

Reduced Decision Time

Reduce time spent deciding what to wear.

Learning Experience

Provides valuable learning experience in building real-world applications.

THANK YOU
